

Shobhit Shukla *Software Engineer*

engshobhitshukla07@gmail.com • 7080963043 • LinkedIn • Leetcode • GitHub • Geeksforgeeks

SUMMARY

Aspiring Software Engineer with expertise in AI/ML and backend development, experienced in building intelligent applications and scalable systems. Proficient in Python, C++, and Node.js, with strong knowledge of data structures, machine learning, and system design. Passionate about solving real-world problems through efficient and innovative solutions.

EDUCATION

B.Tech (CSE - AI/ML) | Honours in Cyber Security, *Dr. Ambedkar Institute of Technology for Handicapped* 08/2023 – Present
Kanpur, Uttar Pradesh

Micro Credit Program in Computer Science, *Indian Institute of Technology (IIT) Guwahati* 06/2024 – 11/2025

SKILLS

Programming Languages: C, C++, Python, Structured Query Language (SQL), JavaScript

Technologies/Frameworks: HTML5, CSS3, React, NumPy, Pandas, Scikit-learn, TensorFlow, PyTorch (Fundamentals)

Developer Tools: VS Code, Git & GitHub, Figma, Canva, Docker, Firefox

AI / Machine Learning: Machine Learning, Deep Learning, Data Preprocessing, Model Evaluation, n8n Automation, Generative AI

Soft Skills: Problem Solving & Analytical Thinking, Communication Skills, Team Collaboration, Adaptability & Learning Agility, Time Management & Ownership

PROJECTS

Linux Systems Toolkit (C++ Based) | Github, *Efficient Log Processing, Caching, and Scalable Network Server Implementation*

- Developed a C++ Linux-based toolkit with log analysis, LRU caching, and a multi-client TCP server for efficient system operations
- Implemented efficient data processing and networking using STL and Linux socket APIs for high-performance communication
- Designed an O(1) LRU cache with concurrent client handling using select() for scalable and reliable server performance

SNI-Driven-Application-Identification-Engine | Github, *High-Performance TLS Traffic Analysis using C++ for Application Identification*

- Developed a network traffic analysis tool for real-time application classification and monitoring of encrypted network data
- Implemented SNI extraction from TLS to detect applications in encrypted traffic without affecting secure communication flow
- Designed a privacy-preserving approach, improving classification accuracy without decrypting HTTPS data for secure analysis

DriveSync Backend System | Github, *Backend System for File Upload, Storage, and Retrieval with Efficient Data Handling*

- Developed a Node.js-based backend for a Google Drive-style storage system with secure file upload and storage functionality
- Built REST APIs for authentication, file and folder management using Express.js for structured and efficient backend operations
- Designed a scalable architecture with efficient file handling and dynamic content rendering using EJS for improved performance

AI Content Generation Engine | Github, *Intelligent Content Generation using Generative AI APIs with Node.js Backend Architecture*

- Built an AI-powered application using Google Generative AI API for context-aware text generation across multiple inputs
- Architected a scalable Node.js backend for prompt engineering and efficient AI workflow management
- Enabled real-time chatbot interactions with optimized response handling for improved user experience

CERTIFICATIONS

- Campus Ambassador – E-Cell, IIT Bombay (2025) | [Link](#)
- Generative AI – Oracle University (2025) | [Link](#)
- Triwizardathon 1.0 – Microsoft (2025) | [Link](#)
- HCL Training Program – HCLTech & GUVI (2025) | [Link](#)
- NASA Space Apps Challenge – Participation (2024) | [Link](#)

ACHIEVEMENTS

Taught basic C++ programming in offline Mode. • Management team in GDSC • Participated in AI Summit 2026
